

NAVY OF OUR UNCLE SAM. Wait Until You See Our New Cruisers in the Water.

Then, Says Secretary Whitney, We Are Next to the Head.

Dynamite and Gunpowder Can Startle the Whole World.

WASHINGTON, Nov. 30.—Secretary Whitney has presented his annual report to the President. After giving a brief review of the condition of the navy as it will exist on the 4th day of March, 1890, in comparison with the same as it existed on the 4th day of March, 1888, and furnishing a list of the vessels heretofore authorized by Congress, the secretary says: "So far as armored ships are concerned, the subject is yet to be treated in a broad and comprehensive manner by the department. At the present time the conditions are such that everything necessary to a first-class fighting ship can be procured, furnished to the department, and constructed in the course of construction any element or feature is required, but this has never heretofore, until the present time, been true, and the department has been necessarily postponed by the department until the present time. The efforts of the department in ship construction have, since March, 1885, been devoted to the construction of vessels, and as to those the department is able to report that, when the ships course of construction and those authorized shall have been completed, the United States will have a second-class fighting ship, a possession of unarmored cruisers, or commerce destroyers, having the highest qualities of speed, and the ability to go upward and possessing speed of 10 knots and upwards.
